## How to hide the switch view panel
Posted by Iwona Hartwig - 05 Aug 2011 20:54

_____

How to hide the switch view panel in featured product grid?

I don't want the user switch view. I want the grid view was the only view in my store.

_____

Hello,

the easiest thing is probably to just hide the switch using css. You can edit the module file assets/gallery.css, change

```
span.clsSwitch {
 color:#666666;
 background-color:#cccccc;
 font-size:1.1em;
 padding:4px;
}
```

to

```
span.clsSwitch {
 color:#666666;
 background-color:#cccccc;
 font-size:1.1em;
 padding:4px;
     display: none;
}
```

Thank You, but this solution resolved my problem in a half way. After this I still see small images to switch view (Img1, Img2). In google chrome browser I see two images to switch view, but in Mozilla firefox I see only one of this. See attachment. What shoul I do?

_____

Your web browser may be caching the stylesheet, you should clear the cache for Google chrome (use the menu option tools->clear browing data)

_____

No It's not brawser cache.

Is see that solution in css display:none; in span.clsSwitch{} don't hide the code

[code]

_____

Nevertheless you are making a mistake somewhere, the code for the buttons is contained in the span tag with the class clsSwitch, giving it a css style of display:none will hide it without a doubt.

If for some reason you cannot make it work you can try deleting the code on lines 4-6 from the template entirely.

[code type=php]Switch View
