

An update version of mod mail this page, version 1.0.1, has been released. This deals with the main issues that have been raised: the warning messages have been dealt with, also language support has been improved.

Mod mail this page is a module extension for the Joomla 1.5 CMS. It allows a site visitor to mail the URL of the current page to a friend - a great viral marketing tool. This module is available under the GPL (General Public License) and can be downloaded without charge from Spiral Scripts [here](#) .
