

We have a new release of our [Featured Items Pro](#) module, version 3.4.0.

This highly versatile module for the Joomla 1.5 and 1.6 CMS allows you to feature articles picked by id, by section or by category. The module displays a thumbnail plus an extract from the text with a link to the article for each item. The items can be displayed in a variety of layouts, including tab pane, accordion, highlighter, thumbnails, and article rotator, with a choice of transition effects for the highlighter and rotator layouts.

There is a choice of colour schemes. Also the module can use GD graphics for improved thumbnail quality.

The latest release includes several improvements, including support for using multiple instances with different colour schemes, a [much improved rotator layout](#) , and a [new highlighter layout](#) .

Existing customers who have bought the module in the last year can download the latest version using their existing download link.
